

InterNACHI® Pool & Spa Inspection Checklist

To have adequate and functional water flow through the pool system, there are several things that need to be in good shape:

- There has to be enough water in the pool or spa. Check the level of the water.
- There shouldn't be any water leaks at the plumbing connections or equipment.
- All of the valves should be fully open.
- There shouldn't be any trapped air in the system. Air at the filter tank should be purged routinely.
- The skimmer and main drain should be clear of blockages and debris. Skimmers require cleaning.
- The strainer pot at the pump should be cleaned routinely.
- There might be an imbalance of the water chemistry, causing scaling. Check for scale-causing clogging or restriction of water flow.
- The heater should be on and activated. The gas shut-off valve should be open. The switch should be on. Check for a pilot light, ignition, or flame at the fuel-fired heater. Check the level in the propane storage tank.
- The thermostat should be connected, active, and set properly.

The following inspection checklist was adapted from the guidelines recommended by the National Swimming Pool Foundation (NSPF).
